Malby & Sons, Photo-Litho.

is, therefore to be recommended that for magnetisation, at all events regularly, the naked hand be used, as was the case with the above mentioned experiments.

A female hand which is magnetised with or without contact with a male hand will for from some minutes to half an hour magnetise likewise as a male hand : a proof that a transmission to it of male magnetism has here taken place.

The invention will prove of great value and use in physics, physiology, psychology and medicine.

Having now particularly described and ascertained the nature of my said invention, and in what manner the same is to be performed, I declare that what I claim is :

1. An apparatus for demonstrating an attractive or repulsive (centrifugal) force produced in and transmissible, without contact by change of temperature and approach, or by contact, to any desired object, comprising a pillar needle in combination with a bearing part balanced thereon, acting as a bearer for the experimental object, of any desired kind and material, placeable on the same, and therefore essentially interchangeable.

2. In an apparatus as claimed in Claim 1, the combination of the pillar needle and the bearing-cap balanced thereon, substantially as and for the purpose hereinbefore set forth.

3. In an apparatus as claimed in Claim 1, the combination of the bearing-cap and interchangeable experimental object, substantially as and for the purpose hereinbefore set forth.

4. In an apparatus as claimed in Claim 1, the combination of the pillar-needle, of the balanced bearing-cap and of the interchangeable experimental object, all substantially as and for the purpose hereinbefore set forth.

Dated this 4th day of March 1897.
